Minbiotics Description and Instructions: The story of liquid trace Elements

Some time after World War II, the Japanese government hired an Atomic physicist to look for a solution to their radiation contaminated waters. One day, after much dismay and desperation, the scientist noticed a very healthy tree growing from a giant rock and wondered, how this could be? When he went over to the rock and there was a crack filled with a mineral ...

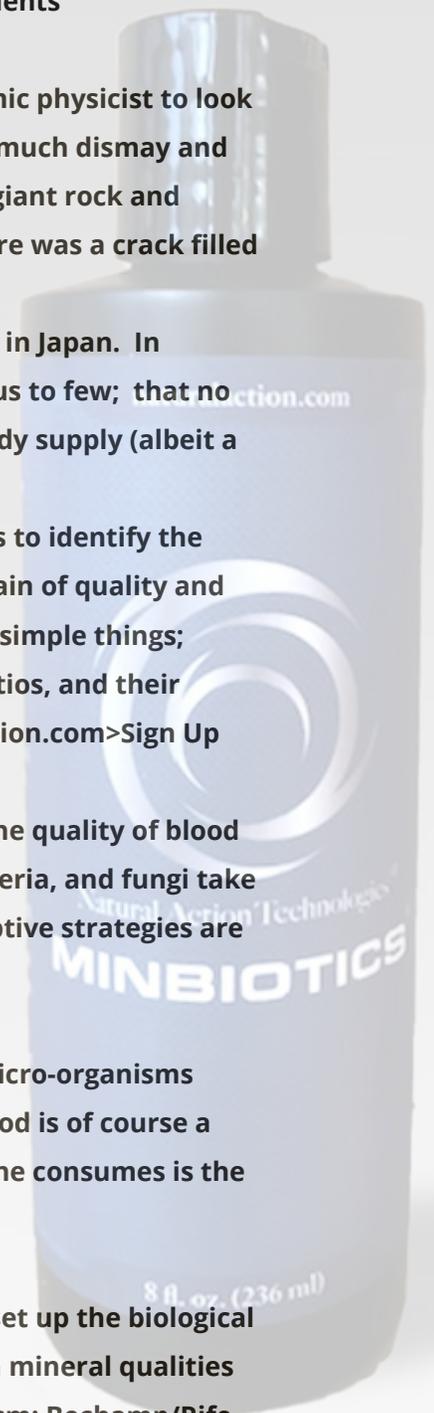

The proceeding studies eventually found their way to medical Doctors in Japan. In particular, a fellow named Dr. Nojima would observe what was obvious to few; that no useful vitamin, or normal body function can take place without a steady supply (albeit a relatively small amount) of the proper macro and micro nutrients.

Others such as a Heinrich, Albrecht, and Reams took painstaking steps to identify the stiff correlation between minerals, soil, plants, and the proceeding chain of quality and health, or degeneration with their absence. It all came down to a few simple things; depletion of the soil micro nutrients / trace elements, their natural ratios, and their impending effect on micro living organisms. To summarize briefly, it is the water and micro nutrients that set up the quality of blood and soil. This is the primary factor in determining whether virus, bacteria, and fungi take on a role of integration or disintegration and whether survival or adaptive strategies are employed by any system.

Through the work of Bechamp, Rife and others, it is known that the micro-organisms mutate according to the environment they are in. Like water, the blood is of course a living organism also. Changing the quality of the water and mineral one consumes is the most rapid way to subtly change all life of the blood.

Minbiotics - The name was derived from the likely idea that minerals set up the biological quality of life that assembles living complexes. Water modulates both mineral qualities and the micro-organisms which associate with them. See Pleomorphism; Bechamp/Rife

"The true foundation of all culture is the knowledge and understanding of water"

The Art of Water

The liquid minerals actively remove hundreds of impurities from water sources; Chlorine and Fluoride, pesticides, pharmaceuticals, as well provide around 80 trace minerals. It is derived from volcanic sulfur ionic compounds, the same that is spewed from the Ocean's floor, where all flowing water ends up and gets cleaned and cycled again. The ionic mineral compounds surround many toxins and render them solid and inert. SARS, H1N1, and many other common pathogenic virus and bacteria cannot survive in this water. The Ancient's referred to it as 'The Golden Elixir'. You can see the precipitation reaction as a yellow / orange ash that settles on the bottom if allowed to sit for periods of hours. This is normal. It won't harm you, but there is no need to drink it. Just pour out the bottom later when finished. Combined with Water Revitalizers, it is the simplest and closest means of achieving the special healing properties of the 'mature mountain spring water' Schauberger spoke of. It is processed in Ohio at a registered FDA facility and made from natural raw volcanic materials shipped from Japan, through a 144 stage NAT commercial passive ionization system. Lab reports and further information at naturalaction.com member site.

Best Instructions for use: Acquire 1-2 gallon glass container with spigot valve as shown in the back round. If you own a portable device alternately dunk and raise the unit repeatedly as the container begins to fill, to gain maximum 'charge'. Then add minerals according to recommended dose for the volume. The water will turn gold within minutes and begin to precipitate impurities within hours. It is ok to drink immediately.

Recommended dose: 1000:1 or 1 Tea Spoon / gallon; 4-6 drops per cup

- Dosage required may vary from person to person
- Some detoxification symptoms can occur, but usually mild if any
- Many people experienced reduced calorie requirements for given energy levels
- As always, gradually introduce new things to your body and maintain comfort
- Animals and Plants love it too! Adjust dose based on response.
